

Easy integration with Webcamconsult

The key to effective business operations!

Want to work efficiently with Webcamconsult on your own system without having to carry out double actions? You can integrate all Webcamconsult functionality within your systems and processes in its entirety. Use your existing software and that of our advanced waiting rooms and consultation rooms, for example.

Appointments or patient details must be entered in the usual place, and all appointment details are then synchronised with Webcamconsult.

1

SINGLE SIGN-ON

If you, the doctor or practitioner, signed on to your electronic patient file, absenteeism software or portal, we ensure that you don't have to sign on again for Webcamconsult. In the calendar of your EPD, you will see an appointment

2

APPOINTMENTS IN THE EPD

Appointments for a webcam consultation are booked in in the EPD in the same way as for regular consultations. Choose an appointment of the type 'webcam consultation', and the appointment will appear in the practitioner's calendar. The patient will receive an e-mail containing the invitation right away and a further reminder on the day of the appointment. The e-mail contains a link to the practitioner's digital waiting room. The patient is easily directed to the correct person via the link.

3

WEBCAMCONSULT IN YOUR PATIENT PORTAL

Integrate Webcamconsult in your patient portal via our API. Alternatively, the special Webcamconsult widgets for the walk-in clinic and bookings can be integrated. Each patient can then see who is available for the walk-in clinic. After completing a form, the patient goes to the digital waiting room of the required doctor or practitioner. Before, during or after the video consultation, it is possible for the patient to start a chat with the practitioner from the portal.

Webcamconsult is used by thousands of doctors and practitioners, for example:

Integration with your system

Webcamconsult offers three options for integration:

-  Via an API
-  Via a VPN HL7 message server
-  Integration of widgets in HTML

Webcamconsult has all the technical resources and expertise it needs to synchronise easily and securely (ISO 27001, NEN 7510, GDPR legislation and regulations) the information necessary for a video consultation and extensive chat. Through our API or VPN HL7 message server, we can synchronise all (appointment) data with your EPD and thereby provide the consultation by computer screen. As an optional extra, the Webcamconsult platform will send a confirmation to your EPD after every completed video consultation so that the consultation is recorded there with the status "completed". Other messages, such as error messages and appointment history, are visible there too.
